

HOMework 5

1. Create a Spring MVC web application which allows customer to register their information (including full name, birthday, email, address, mobile phone, gender). This information must be exported to a binary file (ex: *registration.bin*)

❖ **Requirements:**

- Create a suitable model to store customer information
(ex: *Customer.java*)
 - Add some sample data using IoC container and Java bean
 - New registration should append not overwrite the existing data
2. Create another Spring MVC web application which supports reading data from that binary file and show to the web page
